

Ignition & Switches

OE

GOLD

GM Genuine Parts OE ignition and switch products are the true OE parts installed during production or validated by General Motors for GM vehicles. ACDelco Gold ignition and switch products are the high-quality alternative to OE parts. Gold parts are manufactured to meet expectations for fit, form and function making them a smart choice for General Motors vehicles.**

DISTRIBUTOR CAPS AND ROTORS

- Precision-metal inserts provide maximum coil output and clear markings for easy installation.
- A specially designed distributor vent cap helps protect the interior from contamination and direct entry of water.
- High tension studs and full-size center contact deliver maximum conductivity.
- Full anti-arc barrier reduces the risk of engine misfire.

IGNITION MODULES

- ACDelco adds large buss bars to the original part design for added structural support and conductivity.
- Laser trimming provides precise values and helps eliminate deterioration and damage.
- Electronically welded lead connections help eliminate heat-stress failure or cold joints.
- Copper slug heat sink helps dissipate heat and create a more stable environment.

IGNITION COILS

- Laminations are corrosion-resistant to help keep coils from being exposed to harsh operating environments.
- Laminations are shaped so steel plates surrounding the coil correctly match the original part size and number of plates.

SWITCHES, SENSORS AND RELAYS

- ACDelco offers a variety of switches, including door lock, turn signal, ignition, trunk and windshield wiper switches, for most GM vehicles on the road today.
- High quality switches, sensors and relays help keep the engine running at optimal efficiency while operating at peak performance.
- Proper fit, form and function.

VOLTAGE REGULATORS

- Built as the ideal replacement part for GM equipment and delivers needed system voltage.
- Outstanding radio noise suppression for maximum performance.
- Provides proper fit, form and function to match the original manufacturer specifications.

- An ACDelco GM OE Ignition Coil uses pure copper windings for durability and to help provide resistance to internal shorts and dielectric breakdown.
- Because the number and shape of the laminations determine the output characteristics of an ignition coil, ACDelco ensures that the silicone steel plates surrounding the coil correctly match the original part size and number.

Refer to the electronic catalog system or visit acdelco.com for the most up-to-date applications and a complete list of parts.
